

## II.B Course description

II.B.a	<i>name of Faculty</i>	<i>field of study</i>	<i>specialization</i>
	<b>Faculty of Chemistry</b>	<b>Biotechnology</b>	<b>Industrial Biotechnology</b>
II.B.1	<i>course title</i>		
	<b>Economics and Management</b>		
II.B.2	<i>faculty course code</i>		
II.B.3	<i>type of course</i>		
	<b>obligatory</b>		
II.B.4	<i>level of course</i>		
	<b>basic</b>		
II.B.5	<i>nominal semester (year) of studies</i>		
	<b>Semester I</b>		
II.B.6	<i>number of ECTS points</i>		
	<b>3</b>		
II.B.7	<i>teaching methods</i>		
	<b>W-30, W-2</b>		
II.B.8	<i>language of instruction</i>		
	<b>english</b>		
II.B.9	<i>course leader (responsible for course))</i>		
	<b>Dr Jacek Szumigaj</b>		
II.B.10	<i>prerequisites</i>		
	<b>none</b>		
II.B.11	<i>objectives of the course</i>		
	<p>The course introduces students to the basic principles of micro- and macroeconomics, including supply, demand, production and customer behavior, unemployment, inflation and economic growth. After this course the students should understand the nature of basic economic processes and its influence on people's life and behavior.</p>		

*course contents*

II.B.12

- The Concepts of Economics
- Supply and Demand: Elasticity and Applications
- Demand and Consumer Behavior
- Production and Business Organization
- Analysis of Costs
- Production, Cost Theory, and Decisions of the Firm
- Analysis of Perfectly Competitive Markets
- Factor markets: labor, land and capital
- Imperfect Competition and Monopoly
- Measuring Economic Activity
- Consumption and Investment
- Money and the Financial System
- Monetary Policy and the Economy
- Economic Growth
- Unemployment
- Inflation

*assesment methods*

II.B.13

***Written exam- test or open questions***

*recommended reading*

II.B.14

Samuelson P., Nordhaus W., Economics, McGraw-Hill/Irwin; 19th edition or older

*additional remarks*

II.B.8	<p style="text-align: center;"><i>language of instruction</i></p> <p style="text-align: center;"><b>English</b></p>
II.B.9	<p style="text-align: center;"><i>course leader (responsible for course))</i></p> <p style="text-align: center;"><b>dr hab. inż. Andrzej Kulig, prof. PW</b></p>
II.B.10	<p style="text-align: center;"><i>prerequisites</i></p> <p style="text-align: center;"><b>.....absence.....</b></p>
II.B.11	<p style="text-align: center;"><i>objectives of the course</i></p> <p>The objective of the module is to familiarise the students with the environmental impact assessment procedures to be followed in case of the planned projects and existing facilities. Lectures, provide the students with the knowledge of formal and legal procedures and give them skills required to carry out environmental impact assessments and ecological surveys, and produce formal reports which form the basis for social acceptance and administrative (e.g. environmental) decisions.</p>
II.B.12	<p style="text-align: center;"><i>course contents</i></p> <p>Introductory issues. Environmental impact at the stage of implementation, operation and liquidation of a facility; and assessment of that impact. Basic definitions. Brief history of environmental impact assessments globally, in the EU and in Poland. International principles and regulations (directives and conventions) applicable to environmental impact assessments. Legal basis for environmental impact assessment procedures in Poland – evolution of regulations and their final status. Types of projects affecting the condition of the environment (policies, plans and programmes, and investment projects). Investment process in the context of environmental protection and social requirements. Technical objectives and types of environmental impact assessments (<i>screening</i>). Formal and legal procedures of environmental impact assessment – analysis of patterns. Environmental Impact Assessment in a Transboundary Context. Formal procedure of environmental impact assessment at the project planning stage. Schedule of assessment procedures. Environmental impact assessment procedure for small investment projects. Decision on environmental conditions of project implementation. Assessment methods and techniques. Source materials in environmental impact assessments. Use of environmental monitoring data. Determination of the scope for environmental impact assessment (<i>scoping</i>). Descriptive checklists. How to make the assessments more detailed (from qualitative to quantitative). Environmental impact assessment methods: scaled and weighted checklists, matrices, overlay matrix, network interrelation matrix, environmental status comparison matrix, mathematical modelling. Alternatives of solutions in environmental impact assessments. Extraordinary environmental hazards and their assessment. European Ecological Network <i>Nature 2000</i> and its implications for EIA procedures. Ex-post assessments and ecological surveys (ES). General principles of and formal requirements to be met by the surveys. ES of contaminated areas. Detailed ES procedures (privatisation processes, environmental management, solid waste management). Examples</p>

	of environmental impact assessments produced for industrial projects. Sources and types of the impact. Active and passive methods of reducing unfavourable impact. Public participation in environmental impact assessment procedures. Formats and techniques of consultation exercises involving the general public. Environmental Impact Report – principles of elaboration and formal requirements.
II.B.13	<i>assessment methods</i>
	Colloquy – credit in a written format.

## II.B Course description

II.B.a	<i>name of Faculty</i>	<i>field of study</i>	<i>specialization</i>
	<b>Faculty of Chemistry</b>	<b>Biotechnology</b>	.....
II.B.1	<i>course title</i>		
	<b>Environmental Biotechnology</b>		
II.B.2	<i>faculty course code</i>		
	.....		
II.B.3	<i>type of course</i>		
	<b>Obligatory</b>		
II.B.4	<i>level of course</i>		
	<b>Semi -advance</b>		
II.B.5	<i>nominal semester (year) of studies</i>		

<b>Semester I</b>	
II.B.6	<i>number of ECTS points</i>
	<b>3</b>
II.B.7	<i>teaching methods</i>
	<b>W-15, W-1+C-15, C-1</b>
II.B.8	<i>language of instruction</i>
	<b>English</b>
II.B.9	<i>course leader (responsible for course))</i>
	<b>Prof. dr hab. Stanislaw W. Gawronski</b>
II.B.10	<i>prerequisites</i>
	<b>Basic knowledge on sources of emission, behavior in the environment and toxicity of most important groups of pollutants as: heavy metals, polycyclic aromatic hydrocarbons, aliphatic hydrocarbons, explosives, particulate matter and gaseous pollutants: SO<sub>2</sub>, NO<sub>x</sub> CO, O<sub>3</sub>, TBEX.</b>
II.B.11	<i>objectives of the course</i>
	<b>Possessing by students current knowledge in the area of phyto/bioremediation and information of the possibilities of utilization environmental biotechnologies for restoration of polluted environment.</b>
II.B.12	<i>course contents</i>
	<p>Sites with elevated level of pollutants, mostly of anthropogenic origin, may create serious hazard to environment and human health which can be lowered or eliminated by the use of bioremediation. Many of organic pollutants along with time are degraded by microorganisms (bacteria and fungi). Higher plants, as sessile organisms, during evolution developed mechanism(s) of tolerance and degradation of pollutants that we also should be able to utilize in newly emerging environmental biotechnology – phytoremediation. Bioremediation can be applied both at industrially polluted sites (brown fields) and urban areas, polluted mainly by transport systems. Plants in polluted environment might remediate simultaneously several various pollutants, level of which differs depending upon traffic intensities or the vicinity of factories. Most common pollutants considered for phytoremediation are as follow: heavy metals (Pb, Zn, Cd), organic pollutants (PAHs, TCE, PCB, PCDDs/Fs), exhaust gases (NO<sub>x</sub>, CO, O<sub>3</sub> and additives) and noble metals (Pt, Pl, Ro). Microorganisms and higher plants significantly differ in level of tolerance to pollutants and capability of their uptake, accumulation, transport to easy harvesting organs and degradation/detoxification mechanisms</p> <p>Among cultivated plants, some species of trees, climbers, shrubs, ornamental perennials and annuals, show useful for phytoremediation characters as accumulation and/or degradation of pollutants. Recently it has been shown that these plants can uptake recalcitrant chemicals from the soil or water through roots as well as from air <i>via</i> leaves and either incorporates and stably immobilize them in plant tissues or transform and degrade them by enzymatic processes. Most of these plants are already extensively cultivated for aesthetic reasons or for landscaping purposes in the urban environment and the pollutants in low level are taken up by plants by the way, what means that phytoremediation take place though on low efficiency level. Thus our goal is to enhance and speeding up these processes.</p>

**Lecture:** Introduction: Development of discipline and state of art. Definition of bio- and phytoremediation and area of application. Phytoremediation of heavy metals (HM) from the soil. Plant defense mechanism against HM. Phytoremediation of noble metals. Plant species with high phytoremediation capabilities. Bio/phytoremediation of organic pollutants from the soil Mycoremediation of oil spill from the water and soil. Mechanism(s) of detoxification/degradation of organic pollutants by plants organism. Air phytoremediation of gaseous pollutants: benzene, NO<sub>2</sub>, CO, O<sub>3</sub> and particulate matter. Indoors air phytoremediation in houses, offices and public places. Phytoremediation of sites with high salinity, polluted by radionuclides or explosive materials. Actual regulations and arising area of research and application with new pollutants: pharmaceutical, contraceptive, cosmetics. Necessary information and condition for undertaking decision of phytoremediation application.

**Lab Practicum:** Effect of heavy metals (Pb<sup>2+</sup>, Cd<sup>2+</sup> and Cu<sup>2+</sup>) on germination and growth of mustard and corn. Level of salinity and pH in soil samples collected from sites of de-icing roads in Warsaw, Effect of soil salinity on vegetation. Capacity of *Canna × generalis* and *Coleus blumei* plants for degradation of organic pollutants (RBBR dye). Utilization of mushroom *Pleurotus ostreatus* for bioremediation of oil pollution. Deposition of particulate matters (PM<sub>10</sub> and PM<sub>2.5</sub>) on leaves of several tree species (*Quercus rubra*, *Taxus baccata* and *Carpinus betulus*) or plant samples from students neighborhoods or apartments Amount of waxes on leaves of plants (*Hedera helix*, *Ficus benjamina*, *Schefflera arboricola*) assigned for indoor phytoremediation.

*assesment methods*

II.B.13

Test passing the laboratory work and final test from the possessed knowledge in the subject.

II.B.6	<i>number of ECTS points</i>		
	<b>3</b>		
II.B.7	<i>teaching methods</i>		
	<b>W-15, W-1 + L-30, L-2</b>		
II.B.8	<i>language of instruction</i>		
	<b>english</b>		
II.B.9	<i>course leader (responsible for course))</i>		
	<b>Marek Henczka Ph.D., D.Sc.</b>		
II.B.10	<i>prerequisites</i>		
	<b>Basic course on mathematics and physics</b>		
II.B.11	<i>objectives of the course</i>		
	<b>The goal of the course is to provide students with the knowledge of concept of process control, open and close-loop control systems, process parameters measuring devices, feedback control, performance criteria and importance of control systems in biotechnology.</b>		

*course contents*

The lecture covers the following topics:

1. Introduction to control systems (basic concepts and definitions)
2. Open and closed loop control - objectives and benefits
3. Measuring devices (sensors of temperature, pH, pressure, level, flow rates etc.)
4. Mathematical modelling principles
5. Modelling and analysis for process control
6. Dynamic behavior of typical process systems
7. Feedback control: P, PI and PID control
8. PID Controller tuning for dynamic performance
9. Performance criteria of feedback control
10. Cascade control
11. Examples of application of control systems in biotechnology

The laboratory exercises includes:

1. Dynamic behavior of temperature sensors
2. Dynamic behavior of pressure transducers
3. On-off control of temperature in reactors and bioreactors
4. Practical applications of PID controllers
5. Tuning and settings of PID controllers
6. Numerical simulations of control systems with Matlab

*assesment methods*

**Written examination**

	<b>English</b>		
II.B.9	<i>course leader (responsible for course))</i>		
	<b>dr inż. Katarzyna Pawlak, dr inż. Mariusz Pietrzak</b>		
II.B.10	<i>prerequisites</i>		
	<b>Laboratory of instrumental analysis</b>		
II.B.11	<i>objectives of the course</i>		
	<b>The goal of the course is to provide students with the knowledge of basic concept of planning of the experiments in routine analysis or research. Definition of analytical problem, writing short instructions using English technical vocabulary and analysis of obtained results</b>		

*course contents*

**Project** - Students select one of the proposed subjects presented as an analytical problem to solve. They are expected to design analytical procedure (on the basis of literature) in aim to determine or identify chosen compound(s) with the special emphasis on matrix composition. The report containing analytical procedure is obligatory for admission of student to an experimental part. The project will include following problems:

- determination of metals, amino acids or other components in biological tissue
- determination of metals, dyes or preservatives in food
- determination of bioactive components in drugs

**Laboratory** - Experiments will be carried out by students with minimal control of assistant (short training and safety precautions only). Simple instrumental and classic analytical methods will be proposed as optional in frame of the project:

- Volumetric analysis
- Spectrophotometry
- Capillary electrophoresis
- Liquid chromatography
- Potentiometry
- Voltammetry

**Seminary** - As a summary students are required to present the aim of the project, procedure, results and conclusions in the form of oral presentation.

*assesment methods*

**Project 50 %, laboratory 20% and oral presentation 30% of total points**

*recommended reading*

**Analytical and biotechnological journals from data bases like Elseviere and Springer**

*additional remarks*

**4-5 persons in the group**

II.B.11	<i>objectives of the course</i>
	<b>The goal of the course is to provide students with the knowledge of basic concept of biomedical engineering, particularly in implantable medical devices. Students acquire expertise in evaluation and selection of materials and technologies used in implant production.</b>
II.B.12	<i>course contents</i>
	<p>The lecture covers the following topics</p> <ol style="list-style-type: none"> <li>1. Introduction to biomedical engineering and tissue engineering. <ul style="list-style-type: none"> <li>- Introduction to the human anatomy and physiology. Presentation of major mammalian tissues properties. Cell signalling process and signalling molecules. Biology of the mammalian cell division process and cell ageing phenomenon.</li> </ul> </li> <li>2. Materials applied in implantable medical devices. <ol style="list-style-type: none"> <li>a) Non biodegradable materials: metals, polymers and ceramic.</li> <li>b) Biodegradable natural and synthetic materials applied in implants, biodegradable polymers available on the market.</li> <li>c) Hydrogels, material that mimics properties of the natural tissue.</li> </ol> </li> </ol>

d) Interaction of cells and foreign body implanted in the organism.  
 - Information about metallic alloys employed in prosthesis construction, their properties and behaviour in the body. Biodegradable and non biodegradable polymers applied in implants. Ceramic materials and bioglass applied in implants. Hydrogels preparation methods, their properties and applications in medicine. Proteins and cells adhesion to various materials and surfaces, foreign body response.

**3. Principles of regenerative medicine.**

a) Regeneration process, stimulation of the tissue regeneration process.  
 b) Stem cells; their origin and properties. Stem cells harvesting, multiplication and differentiation.  
 c) In situ recruitments of cells.  
 - Description of the regeneration process with and without the active participation of stem cells. of Stem cells harvesting methods from bone marrow, placenta, blood and fat. Stem cells multiplication, properties, differentiation and application.

**4. Examples of the existing implantable medical systems.**

a) Implantable drug delivery systems, particles, pumps and other.  
 b) Bone implants, biodegradable bone implants and non biodegradable bone and joints prosthesis.  
 c) Implantable heart prosthesis and heart pacemakers.  
 d) Vane grafts and urine ducts.  
 e) Coronary stents.  
 f) Implantable hearing aid.  
 g) Surgical sutures – biodegradable and nonbiodegradable.  
 h) Dental implants, breast implants.  
 - Description of implantable medical devices which are already available in hospitals and currently applied in clinical routine or medical devices which are currently tested in hospitals. Safety aspects and reliability of implantable medical devices.

**5. Future of regenerative medicine and artificial organs.**  
 - Short review of the current research trends in the area of regenerative medicine, implantable devices and artificial organs. Review on possible power sources for implantable devices. Nanotechnology application in medicine and in implantable medical devices.

	<b>Faculty of Chemistry</b>	<b>Biotechnology</b>	<b>Industrial biotechnology</b>
II.B.1	<i>course title</i>		
	<b>Bioethics</b>		
II.B.2	<i>faculty course code</i>		
	.....		
II.B.3	<i>type of course</i>		
	<b>obligatory</b>		
II.B.4	<i>level of course</i>		

	<b>basic</b>
II.B.5	<i>nominal semester (year) of studies</i>
	<b>Semester II</b>
II.B.6	<i>number of ECTS points</i>
	<b>4</b>
II.B.7	<i>teaching methods</i>
	<b>W-30, W-2</b>
II.B.8	<i>language of instruction</i>
	<b>english</b>
II.B.9	<i>course leader (responsible for course))</i>
	<b>Dr Beata Witkowska-Maksimczuk</b>
II.B.10	<i>prerequisites</i>
	<b>no</b>
II.B.11	<i>objectives of the course</i>
	<b>The purpose of this course is introduce students to bioethics as an interdisciplinary subject through critical thinking, writing, and discussing contemporary issues. Bioethical thinking is neither biology nor ethics but, rather, a melding of both of them. Interdisciplinary thinking is solidly rooted in the processes of scientific thinking and, simultaneously, is solidly rooted in the processes of philosophical thinking.</b>
II.B.12	<i>course contents</i>
	A participant who has successfully completed this course should: 1) Be able to understand the complex normative systems of bioethics, health law and international human rights as they impact on the development of health policy, locally, nationally and internationally. 2) Be able to apply the complex normative systems of bioethics, health law and international human rights as they apply to a variety of contemporary issues in this area locally, nationally and internationally 3) Be able to understand the impact on the complex normative systems of bioethics, health law and international human rights of international trade agreements and the lobbying principles of corporate globalisation 4) Be able to write and speak effectively at an academic or high policy level in the areas of regulation of cost-effectiveness evaluation of medicines and access to health services 5) Be able to effectively resolve disputes arising in this area in private or public legal practise.
II.B.13	<i>assesment methods</i>
	<b>Written examination</b>
II.B.14	<i>recommended reading</i>

II.B.15	<i>additional remarks</i>
	<i>no</i>

## II.B Opis przedmiotu (*Course description*)

### **nazwa Wydziału, kierunek studiów ewentualnie specjalność**

PL *instrukcja:* proszę podać nazwę Wydziału, kierunek studiów ewentualnie specjalność

II.B.a

**Wydział Chemiczny, kierunek Biotechnologia**

*name of Faculty, field of study, specialization*

**Chemistry , Biotechnology**

### **nazwa przedmiotu**

PL *instrukcja:* proszę podać nazwę przedmiotu

II.B.1

Bioinformatyka

*course title*

ENG

Bioinformatics

### **wydziałowy kod przedmiotu**

PL *instrukcja:* proszę wypełnić opcjonalnie, jeżeli wydział ma ustalone kody przedmiotów

II.B.2

*faculty course code*

ENG

Optionally if faculty established course code

### **typ przedmiotu**

PL *instrukcja:* proszę wybrać spośród: obowiązkowy / fakultatywny ograniczonego wyboru / fakultatywny dowolnego wyboru

II.B.3

obowiązkowy

*type of course*

ENG

obligatory

II.B.4 PL

### **poziom przedmiotu**

**instrukcja:** *proszę opcjonalnie wybrać spośród: podstawowy / średnio-zaawansowany / zaawansowany*

Średnio-zaawansowany

***level of course***

ENG

an intermediate level

**nominalny semestr (rok) studiów**

PL **instrukcja:** *proszę podać nominalny semestr (rok) studiów*

Semestr II

II.B.5

***nominal semester (year) of studies***

ENG

Semester II

**liczba punktów ECTS**

*Punkty winny być przyporządkowane wszystkim przedmiotom, które kończą się ewaluacją, zgodnie z zasadą, że nakład pracy przeciętnego studenta przypadający na rok akademicki odpowiada 60 punktom ECTS, również w przypadku, gdy przedmioty pogrupowane są w moduły, lub większe „bloki”. Punkty powinny uwzględniać także czas studenta poświęcony na wykonanie takich zadań obowiązujących w ramach zajęć z danego przedmiotu jak prace semestralne/roczne/ dyplomowe, dysertacje, projekty/ćwiczenia realizowane w laboratorium, prace terenowe itp.*

PL **instrukcja:**

II.B.6

3

***number of ECTS points***

ENG

3

**metody nauczania**

PL **instrukcja:**

*1) podać rodzaj prowadzonych zajęć dla danego przedmiotu do wyboru z listy: wykłady (W); ćwiczenia (Ć); laboratorium (L); projekt (P)  
2) podać liczbę godzin w tygodniu np. W - 2; Ć - 2; L - 3; P - 0  
3) podać liczbę godzin w semestrze np. W - 30; Ć - 30; L - 45; P - 0*

II.B.7

W-15, W-1 + L-15, L-1

***teaching methods***

ENG

W-15, W-1 + L-15, L-1

II.B.8 PL

**język wykładowy**

*instrukcja: język w jakim będzie prowadzony przedmiot*

polski

***language of instruction***

ENG

english

**prowadzący przedmiot (odpowiedzialny za realizację przedmiotu)**

PL *instrukcja: tytuł i/lub stopień naukowy /*

II.B.9

Prof. Piotr Zielenkiewicz

ENG

***course leader (responsible for course realization)***

**wymagania wstępne**

PL *instrukcja:*

*Zakres wiadomości / kompetencji / umiejętności, jakie powinien już posiadać student przed rozpoczęciem nauki przedmiotu, a także specyfikacja innych przedmiotów lub programów, które należy zaliczyć wcześniej.*

II.B.10

*Uwaga: maksymalna objętość tekstu to 1/2 standardowej strony A4*

Chemia organiczna, biochemia, genetyka

ENG

***prerequisites***

Organic chemistry, biochemistry, genetics,

**cele przedmiotu**

PL *instrukcja:*

*Opis zakładanych kompetencji i umiejętności jakie student nabywa w wyniku zaliczenia przedmiotu.*

II.B.11

*Uwaga: maksymalna objętość tekstu to 3 linie standardowej strony A4*

***objectives of the course***

ENG

Students will learn about modern methods of databases searching using both nucleic and amino acid sequences, methods for sequencing genomes, comparative and functional genomics and protein structure modeling methods

II.B.12

**treści merytoryczne przedmiotu**

PL

*instrukcja: P.*

*treści merytoryczne przedmiotu dla każdej składowej przedmiotu tj. dla W; Ć; L;*

*Uwaga: maksymalna objętość tekstu to 1 standardowa strona A4*

ENG

***course contents***

The lecture will address various databases used in molecular biology and biotechnology, and the linkage between types of data. Basic operations on a single and multiple sequences will be discussed along with methods allowing two-sequence comparison and searching databases with nucleotide or amino acid sequences. During the lecture we will assess the concept of protein families, motifs related to function, cell compartments segregation signals and sequences controlling gene expression. Advanced methods for finding similarity between sequences will also be presented. The lecture will further describe methods for genome sequencing, distinguishing between coding and noncoding DNA sequences (ab initio methods and homology based methods), genome annotations, and comparative and functional genomics at the genomic level. Finally the lecture will address theories of protein folding, tools exercised by molecular graphics, modeling of protein structures, structure of biopolymers, protein-protein interaction networks, types of biological networks, and the analysis of various -omics data taken from -omics experiments data, with basic concepts in systems biology.

**metody oceny**

PL *instrukcja:* Uwaga: należy wypełnić jeżeli skrócony regulamin przedmiotu zawiera coś ponadto co znajduje się w Regulaminie Studiów §6, 7 i 8. (link w nazwie punktu 13 w jęz. Polskim

II.B.13

egzamin

***assessment methods***

ENG

exam

**spis zalecanych lektur**

PL *instrukcja:* Wykaz lektur i innych materiałów zalecanych studentom podejmującym naukę przedmiotu

II.B.14

***recommended reading***

ENG

**uwagi dodatkowe**

PL *instrukcja:* np. limit osób w grupie, termin rejestracji na zajęcia; inne istotne dla studenta informacje.

II.B.15

***additional remarks***

ENG

**II.B Course description**

	<i>name of Faculty</i>	<i>field of study</i>	<i>specialization</i>
II.B.a	Faculty of .....	Biotechnology	Chemical Biotechnology.....
II.B.1	<i>course title</i>		

<b>Chemical Biotechnology: Biomolecules in Synthesis and Therapy</b>	
II.B.2	<i>faculty course code</i> .....
II.B.3	<i>type of course</i> ..... <b>obligatory</b> ... ..
II.B.4	<i>level of course</i> ..... <b>advanced</b> .....
II.B.5	<i>nominal semester (year) of studies</i> <b>semester II</b>

II.B.7	<i>teaching methods</i> <b>W-15, W-1</b>
II.B.8	<i>language of instruction</i> ..... <b>english</b> .....
II.B.9	<i>course leader (responsible for course)</i> <b>prof. dr hab. Maria Bretner, prof. dr hab. Anna Boguszewska-Chachulska, dr. inż Monika Wielechowska.....</b>
II.B.10	<i>prerequisites</i> <b>...Enzymology, Organic Chemistry, ....</b>
II.B.11	<i>objectives of the course</i> <b>The aims of this lecture is to acquaint students with the use of biomolecules in the synthesis of chemicals used in medicine, or as a therapeutic agents. ....</b>
II.B.12	<i>course contents</i>

1. Protein expression in bacterial systems – promoter types, tag systems, secretion machinery, protein stability and folding
2. Protein engineering – site-directed mutagenesis and directed protein evolution as the tools for enzymes modifications, examples of procedures (DpnI protocol, error-prone PCR, DNA shuffling)
3. Synthetic application – modification of enantioselectivity of hydrolases, substrate specificity, pH and temperature profile and solvent tolerance
4. High-throughput screening – methods for variant selection (spectrophotometric methods, gas chromatography, mass spectrometry, NMR)
5. Enzymes as a therapeutic target - viral enzymes important for replication and their inhibitors,
6. Cancer cell enzymes and their inhibitors
7. Enzymes used as therapeutic agents
8. Antibodies in therapy – special focus on cancer treatment
9. Antisense Oligodeoxynucleotides as pharmacological and therapeutic agents.
10. RNA interference in therapy, studies and modulation of biological processes,
11. Therapeutic applications of ribozymes, DNAzymes and aptamers
12. Viral vectors a in gene therapy, and delivery of nucleic acids and DNA vaccines
13. Prospects of stem cells therapy and therapeutic cloning
